### About Me

Full Stack Web Developer with training in front and back end technologies such as ReactJS, ExpressJS, NodeJS, MongoDB, HTML, CSS/SCSS. A people's person with proven experience of working in a team. Recently completed a 6 month bootcamp. Now prepared for the next challenge and looking forward to becoming an experienced developer!

### Projects

#### LinkUp

<https://linkup-gjpb.onrender.com>

LinkUp is a dynamic social media platform that I developed using the MERN stack. The platform allows users to connect with each other and share updates. The project utilizes React for the front-end, Node.js and Express for the back-end, and MongoDB for the database. For styling, I have selected Material UI and implemented a dark mode.

Overall, LinkUp is a project that showcases my skills in web development and my ability to create complex applications using the MERN stack.

#### SchnellFinder

<https://schnell-finder.onrender.com>

The dashboard website I developed using the MERN stack and Material UI dark theme is a powerful tool for businesses to visualize and track their key performance metrics. With a focus on clean design and intuitive navigation, this dashboard offers users an easy way to monitor their company's performance in real-time.

The platform leverages the latest web technologies to deliver a seamless user experience. The front-end is built with React and Material UI dark theme, while the back-end is powered by Node.js and Express. MongoDB is used as the database to store the necessary data.

Overall, the dashboard website using the MERN stack and Material UI dark theme is a valuable tool for businesses looking to track and visualize their performance metrics in a user-friendly and efficient way.
